

DIRECT VENT KITS

CeraFlex Direct Vent

CeraFlex Direct Vent Termination

**CeraFlex
Riser Terminal**

Direct venting can provide considerable savings to homeowners in many instances. In new construction it may eliminate the need for costly chimney installation. In system replacement it may eliminate the need for a costly reline. It is also a viable chimney alternative in electric heat conversions.

Pensotti's offerings are unique in that they allow for direct venting with Pensotti boilers of up to five sections while other manufacturers are limited to lower output appliances.

Pensotti kits will accommodate runs of up to 20 feet while competitors are often limited to ten.

Pensotti also offers a riser terminal for use in situations where ground clearance is a problem. This unique feature greatly expands the use of direct venting.

Pensotti direct vent kits come complete with vent pipe, appliance adapter, terminal adapter, terminal, Flexible air intake, intake clamp, burner air adapter, and CeraFlex sealant.
